

EDITORIAL

This issue is a regular issue, which is composed of 4 papers.

The first paper by *Cecil et Miguel Pirela-Cruz* propose an information centric framework to develop virtual reality environment for micro surgery. This paper was previously published with errors (see ERRATA next page).

In the second paper, *Andrew Ray* investigates the state of developing virtual environments (virtual reality toolkits).

In the third paper, *Hongbiao et al.* develop a walking in place (WIP) system that uses the zero crossing algorithm and Microsoft Kinect sensor.

In the last paper, *Greeshma Sharma et al.* propose a survey on artificial neural network possibilities in virtual reality.

We hope the readers can benefit a lot by reading these papers.
